

This is a highly detailed architectural floor plan of a hospital building, showing a complex network of air and water distribution systems. The plan is divided into several functional zones, including medical offices (BUREAU MEDICAL), meeting rooms (SALLE DE REUNION), waiting areas (ATTENTE), and various specialized treatment rooms (e.g., CHAMBRE, SALON FAMILLES, SALON INF). The air flow system is represented by a dense network of red dashed lines, with numerous labeled air valves (e.g., DOIAO-ADM001-1, DOIAO-ADM004-1, DOIAO-ADM004-2, etc.) and control points (e.g., VDIAG-C2.1, VDIAG-C2.2, VDIAG-C3.1, etc.). The water flow system is represented by blue solid lines, with labeled water valves (e.g., MEIAO-EAD310, MEIAO-EAD310.1, MEIAO-EAD310.2, etc.) and control points (e.g., BUS N°1, BUS N°2, BUS N°3, etc.). The plan also includes various other rooms such as a kitchen (CUCINE), a laundry room (LAVOIR), a storage room (STOCKAGE), and a central heating plant (CHAUDOIER). The overall layout is highly organized, with rooms and corridors clearly defined, and the flow paths meticulously traced across the entire floor plan.
