DAU : Dauphin EP

T : Té de visite

G : Grès

This architectural plan illustrates the roof drainage system (EP) for a building. The plan includes a detailed layout of the building's footprint, showing various rooms, corridors, and external structures. The drainage system is represented by a network of lines and symbols, with numerous numbered callouts (e.g., 11, 16, 17, 18, 20, 22, 23, 27, 30, 40) indicating specific features and components. The plan also includes a legend in the top left corner defining the symbols used for different types of drainage elements, such as canalisations, siphons, and grilles. The overall layout shows a complex arrangement of rooms and corridors, with the drainage system integrated throughout the building's footprint.
