PRECISIONS:

Suite au visa VAOB du 13/02/25, LAM a traité les différentes remarques. Le plan actuel (Rev B) intègre les corrections suivantes :

- Modification des opérations d'ouverture des compartiments techniques habillés en pierre (page 22).
- Suppression des vis visibles sur les torchères (page 18).
- Correction de la disposition du motif fleur de lys en quinconce (page 20).
- Suppression du support pour le dispositif AV-S07-01 (sur toutes les pages concernées, en particulier page 16).
- Ajout d'une page (page 28) avec le repérage des points d'appui de la vitrine au sol, plan fourni à la MOE bâtiment le 07/02/25 pour validation de la descente de charge de la vitrine.

Concernant le titre du document et la vocation du visa, LAM précise que la vitrine complexe VI-S07-01 suivra un processus de mise au point et de fabrication spécifique. LAM prévoit notamment un montage à blanc complet de la vitrine dans ses ateliers avant sa livraison et son installation sur site. Ce montage à blanc sera réalisé en plusieurs étapes afin de valider progressivement les différents composants de la vitrine :

1. Construction de la structure
Le présent plan (Rev B) et le visa attendu permettront la construction de la structure basse et haute de la vitrine, incluant les poteaux reliant la base et le plafond.

- LAM précise également avoir reçu :
- Le 07/02/25, un visa VSO de TPFI sur la note de calcul soumise (Batiged).
 - Le 10/02/25, un avis de l'AGENCE DE PONTAUD confirmant que la question de la descente de charge de la vitrine sur le plancher est apurée côté MOE ACMH (mail)

2. Installation et validation des interfaces techniques
Cette phase successive permettra de valider les interfaces techniques.
Une portion des gaines de climatisation ainsi que les raccords aux grilles de soufflage et de reprise seront installés afin de valider l'interface entre la vitrine et le traitement climatique.
Les passages de câbles seront également testés et validés.

3. Traitement graphique des vitrages et systèmes d'ouverture
Cette phase successive permettra de finaliser et valider les éléments graphiques ainsi que les systèmes d'ouverture/fermeture de la vitrine.
Pendant la construction de la structure, les études du traitement graphique des vitrages (motif fleur de lys et dégradé) devront être finalisées et les échantillons validés.
Les vitrages fixes et ouvrants, ainsi que leurs systèmes d'ouverture et de condamnation, seront ensuite installés et testés.

4. Validation des habillages et finitions
Cette phase successive permettra de valider les éléments d'habillage et de finition de la vitrine :
 - l'habillage du plafond.
 - la fixation des rails d'éclairage.
 - l'habillage intérieur de la base.
 - la fixation des supports primaires des parures et des torchères.
 - la fixation des cartels graphiques.
 - l'habillage en pierre de la base et des accès aux compartiments techniques.

Afin d'assurer un suivi méthodique des validations, LAM propose d'adopter une nomenclature évolutive pour le plan, avec un numéro de phase progressif. Ainsi, ce premier plan, centré sur la structure, pourrait être intitulé : **VI-S07-01 PHASE 1**. Le numéro de phase sera ensuite incrémenté (PHASE 2, PHASE 3...) au fur et à mesure des validations des composants de la vitrine.

PRECISIONS:

Suite au visa vao du 03/03/2025, LAM a pris en compte les différentes remarques. le plan actuel (rev c) intègre les corrections suivantes :

- pag 4 : positionnement du trou de la serrure à 150x150 mm depuis le bord inférieur de l'ouvrant technique
- pag 5 : indication de l'angle d'ouverture de l'ouvrant de la vitrine
- pag 6 : réduction de 5 mm en hauteur du passage utile pour l'adaptation des charnières de l'ouvrant de la vitrine ; ajustement des dimensions de l'alimentation électrique lot sc02
- pag 14 : ajout des instructions d'ouverture de la vitrine

LAM fournira les échantillons nécessaires pour toutes les finitions non vues à ce jour.

PRECISIONS:

Suite au visa vao du 03/03/2025, LAM a pris en compte les différentes remarques. le plan actuel (rev c) intègre les corrections suivantes :

- pag 4 : positionnement du trou de la serrure à 150x150 mm depuis le bord inférieur de l'ouvrant technique
- pag 5 : indication de l'angle d'ouverture de l'ouvrant de la vitrine
- pag 6 : réduction de 5 mm en hauteur du passage utile pour l'adaptation des charnières de l'ouvrant de la vitrine ; ajustement des dimensions de l'alimentation électrique lot sc02
- pag 14 : ajout des instructions d'ouverture de la vitrine

LAM fournira les échantillons nécessaires pour toutes les finitions non vues à ce jour.

PRECISIONS:

Suite au visa vao du 03/03/2025, LAM a pris en compte les différentes remarques. le plan actuel (rev c) intègre les corrections suivantes :

- pag 4 : positionnement du trou de la serrure à 150x150 mm depuis le bord inférieur de l'ouvrant technique
- pag 5 : indication de l'angle d'ouverture de l'ouvrant de la vitrine
- pag 6 : réduction de 5 mm en hauteur du passage utile pour l'adaptation des charnières de l'ouvrant de la vitrine ; ajustement des dimensions de l'alimentation électrique lot sc02
- pag 14 : ajout des instructions d'ouverture de la vitrine

LAM fournira les échantillons nécessaires pour toutes les finitions non vues à ce jour.

MA-S16-04 : Maquette de la cathédrale gothique
MA-S16-05 : Maquette de la cathédrale détruite après la Première Guerre Mondiale

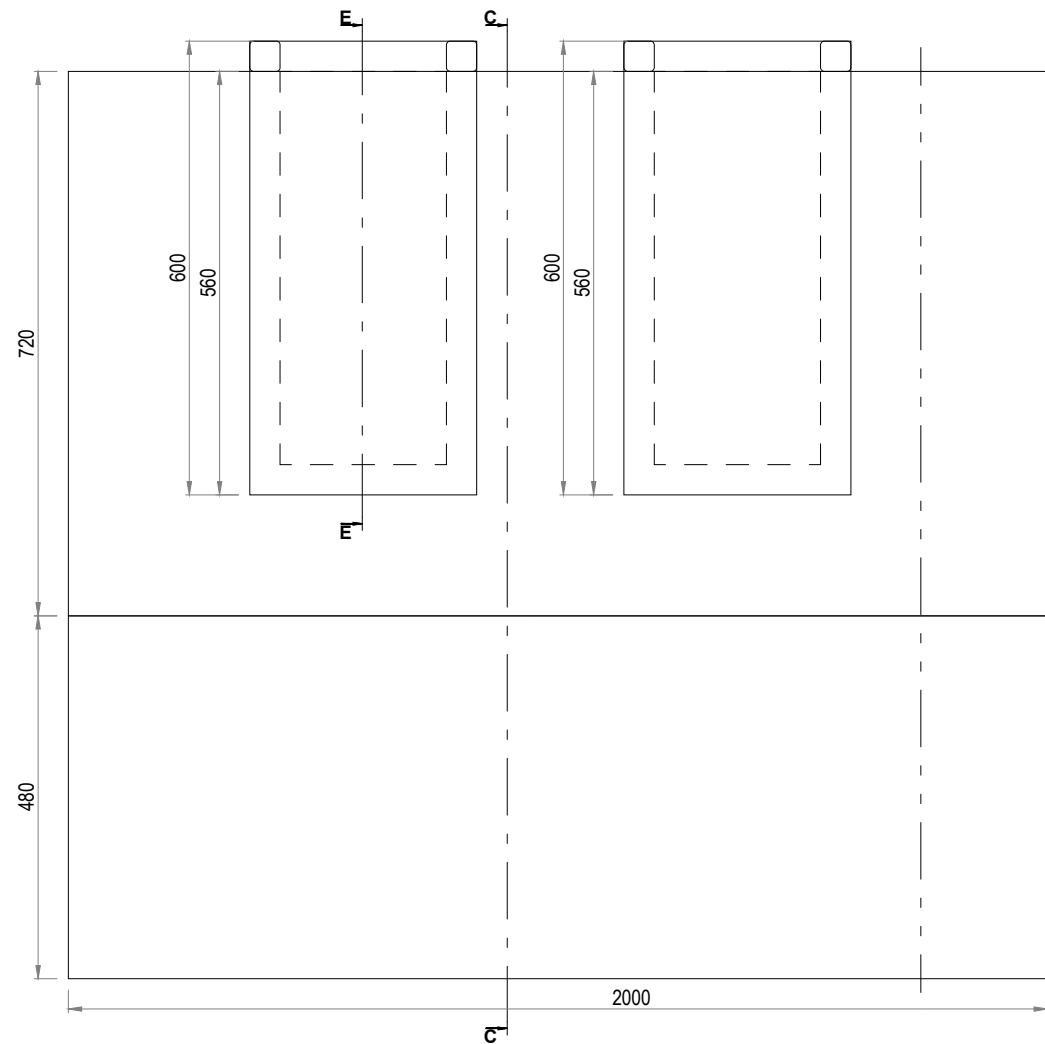

Le dispositif MA-S16-04 est une maquette 3D monochrome de la cathédrale de Reims à la période gothique. Le dispositif MA-S16-05 est une maquette 3D monochrome de la cathédrale de Reims partiellement détruite après les bombardements de la Première Guerre Mondiale. Le niveau de détail permettra de comprendre le volume globale de la cathédrale, certains des détails architecturaux seront en revanche simplifiés. L'intérieur du bâtiment sera perceptible par la toiture détruite de MA-S16-05. Les deux maquettes seront reproduites à la même échelle afin de permettre une lecture comparative.
