Environmental Impact Assessment

Functional unit	The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense). Therefore, the functional unit shall be clearly defined and measurable. The functional unit of this analysis is “Mettre à disposition une cabine insonorisée pendant un an.”
Impact Indicator	The impact is measured through the "EF v3.1" method
Electricity impact calculation method	Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.
Hypothesis	Matières premières : Densité du bois aggloméré : 650 kg par m3 Densité du bois : 800 kg par m3 -- Transport et distribution : distances. IDF : 50 km, France : 500 km, Belgique : 310 km, Chypre : 3950 km, Allemagne : 600 km, Italie : 920 km, Luxembourg : 360 km, Pays-Bas : 490 km, Pologne : 1550 km, Portugal : 1700 km, Espagne : 1250 km, Suisse : 550 km, Royaume-Uni : 460 km. Moyenne : 700 km (pondération de toutes les livraisons depuis la France sur 2025) Moyenne France : km (pondération de toutes les livraisons France-France sur 2025) -- Utilisation : Durée d'utilisation de tous les appareils, hors détecteur de présence : 336h par an.

Environmental Impact Assessment

System Boundaries	Cette étude concerne uniquement les cabines assemblées en / expédiées depuis la France.
Exclusions	Matières premières : Les procédés de sérigraphie sur verre sont exclus du périmètre de l'étude (impact peu significatif). -- Fin de vie: - Exclusions de l'impact du démantèlement. - Exclusion de l'acheminent des déchets (uniquement les déchets verre, bois, textile) vers le centre de tri en fin de vie.

Net Zero Strategy

greenly

Climate strategy pillars

In 2015, 193 countries committed to limiting global warming to 1.5°C.
To achieve this, companies should follow these **5 pillars** of the Net Zero Initiative:

1 MEASURE	2 REDUCE	3 EDUCATE	4 COMMIT	5 CONTRIBUTE
Track emissions annually	Choose an action plan in line with the Paris Agreement	Engage suppliers in the strategy	Commit to an objective	Contribute in carbon sequestration & avoidance projects to cover non compressive emissions
Go deeper in the analysis of the main emission sources	Quantify the action plan to build a carbon trajectory	Train all employees	Communicate transparently	

Evaluate the climate engagement of suppliers
