

## HUB ASSEMBLY

### Marks on hub and propeller blades

In order to be able to adjust propeller control and feed back devices of the remote control system at starting up and subsequent checks, marks have been made on the propeller hub and blades, see below figure.

There is an indicating mark on each propeller blade flange..

Each blade seat in the hub has three setting marks.

'F'	Mechanical end position ahead pitch
'K'	Design pitch
'B'	Max astern combinator pitch
